

"SOMEBODY must understand Physics."

Mr. Tucci points out an interesting General Science poster.

SCIENCE

Mr. Edward Stolt

Our school offers a varied science program on every grade level. Freshmen are given an over-all introduction with a course in General Science. Sophomores take up the study of Biology and go through the rigors of leaf collections, dissections and notebooks. Juniors and Seniors invade the chemistry labs and at least twice a year perfume the halls with some fragrant concoction. The Senior year gives students a choice of Physics or Human Biology. Although the Physics room sometimes looks like overgrown erector sets, much is accomplished. This year, because of popular demand, Human Biology was offered as a college credit course for the first time. A select group of Seniors were introduced to the PSSC course, a new development in Physics. Another "first" in the science department is our participation in a Science Fair. All science students were urged to enter a project.

FIRST ROW, left to right: Frances Strippy, B.S.; Helen Schlesinger, A.B.; Marijane Parrish, A.B.; Rhona Friend, M.A. SECOND ROW: Clifton C. Copper, M.S.; Nicholas Tucci, B.S.; Joseph Froncek, M.Ed.; Edward Stolt, M.A.; Robert Graziul, B.S.; Henry Gary, B.A., Robert Tilly, M.A.

And during prohibition, distillation of alcohol could be . . ."
