Boiduin College
Montclair State
College, B.A., M.A.
Rutgers University

"But I don't want to cut a worm."

"Well, so far, out of 495, I have 86 points."

Mr. Edward Stolt

Rockets are zooming to the moon, and our science department is following close behind. Insects fly out of collection boxes in Biology I; the Chemistry students watch their experiments, over which they have huddled with loving care, pop their corks and blow geisers to the ceilings, while their big brothers of P.S.S.C. measure the sound waves coming from the biology II rooms where the brave seniors scream as they watch a drop of blood "pop" out of their precious body so they can study its various properties.

All in all, our students at S.P.F.H.S. will be able to meet the wonders of tomorrow as they puzzle over their experiments of today.

SCIENCE

"Good luck. The life you save may be mine!"
