## MATHEMATICS

Miss Linda Alvord

No one wonders more what has happened to the math department lately than the poor, befuddled students. Subject matter is becoming more advanced and the pace is faster. People are learning more reasoning and less rules. In fact, this department has accelerated to the point where interested students may take courses that teach nearly college-level material. Under the capable direction of the math department new theories and experimental textbooks have been adopted to the advantage of everyone concerned. This, along with outstanding instructors and generous facilities, has given our school an impressive reputation in the field of Mathematics.

"I hope it's not as hard as it looks."

"At least we're trying."
