

One of P.S.S.C.'s "Thirty-four Easy Lessons"!

SCIENCE DEPARTMENT

Mr. Edward J. Stolt

The Science Department supplements "book learning" with actual experience.

You can easily learn to spot the students of the sciences in action. For instance, if you see students picking flowers on their way home from school you can be almost certain they have Biology I.

If, strolling through the upstairs corridors, you hear a series of "ouches" and "ows", you can assume Biology II students are learning more about their blood.

If a smell invades the hall or bunsen burners are ablaze, Chemistry students are delving into the mysteries of matter.

On the other hand, if you trip over some students on their hands and knees, you should immediately know that the Physics Department is measuring the hall for another experiment to study distance, motion, or the like.

As for Applied Science students, I leave it up to you to learn their distinguishing characteristics.

"Come out, little pancreas, wherever you are!"

"... so that's where eyelashes are always getting stuck!"

S.P.F.H.S.' version of "Go Fish"!
