

"... and I won't curve it, either!"

## MATHEMATICS DEPARTMENT

*Miss Linda Alvord*

New methods in the field of mathematics, known as the science of numbers and quantity, have been rapidly materializing in the past few years.

Our Mathematics Department is presenting to interested students, an introduction to these latest approaches in solving the problems encountered in this machine and space age. This includes Algebra, Plane Geometry, Trigonometry, and Solid Geometry classes, with some work in Calculus and Computations. More than ever, our Mathematics Department is concentrating on looking for any new phases of this subject to teach the students.

We are fortunate in having a fine mathematics program enabling the student to acquire a good foundation for any future endeavor in higher math.

"Well, it looked all right on my paper!"

"Sorry, sir, but my mind seems to be the null set, today!"

"Isn't that a little too large, sir?"
