

## ADVANCED CHEMISTRY CLUB

*Mr. Robert Tilley*

This club is comprised of students taking our honors course in chem. study, who are interested in gaining a more general knowledge of chemistry. The club meets once weekly and is run like an eighth period class. A college chemistry text is used as a guide for demonstrations and discussions. Students in this group will have quite an advantage if and when they take college chemistry.

FIRST ROW, left to right: P. Nechwort, J. Lehr, W. Baker, M. Cutler. SECOND ROW: M. Smolin, M. Runnells, R. Bellamy, C. Brainard, T. Smith. THIRD ROW: R. Brantt, D. Firstenberg, P. Armerding, M. Arentoft.

Students taking the famous P.S.S.C. Physics course often want to learn even more. P.S.S.C. has to leave out many topics usually covered in a regular course and the students in this club study these topics to get a more well-rounded physics background. Supplementary texts are used and all benefit from the study in this weekly "eighth period" class.

## ADVANCED PHYSICS CLUB

*Mr. Robert Tilley*

FIRST ROW, left to right: V. Radcliffe, D. Kisner, S. Skiba, H. Swerdlove. SECOND ROW: G. Wilson, D. Firstenberg, B. Osmun, R. Evarts.
