## SCIENCE DEPARTMENT

### Mr. Stolt

If you have ever walked down the hall and been engulfed by a cloud of thick white smoke or been narrowly missed by a carefully dropped weight while climbing the stairs, you know our Science Department is hard at work.

The well-qualified teaching staff in all fields, Biology, Chemistry, Applied Science, and Physics, has been busy developing new and complicated experiments to measure molecules, motion, and red blood cells—in various courses, of course!

The caliber of the teaching techniques in combination with the complete array of facilities and opportunities has made an excellent department, with benefits to be reaped by all its participants.

"Hey kids, how's this grab ya?"

"Another electrifying chemistry period."
