

Team Teaching In Math Department

Three adventurous teachers have begun work on an exciting, exploratory experiment. Miss Alvord, Mr. Volpe, and Miss Davis, are now practicing team teaching for the first time with their Math II students. The fifty participants have been divided into three classes, each group changing teachers periodically. Once each week the classes meet as a whole in the auditorium. At these sessions the department hopes to have outside speakers including Miss Roberts, the coordinator of mathematics in Scotch Plains, superintendent of schools, Dr. Rossey, and Dr. Sobel, a mathematics professor from Montclair State College.

The math lab has proven its worth as much more than a teaching aid. Many students often use the computers and calculators for practical purposes outside the math class.

Continually seeking to challenge its students, the Math Department even offers Calculus, a college course, to students who have completed the regular math program.
