

Science Department Still Moving

The transfer to the new addition entailed a considerable amount of work for the Science Department. Though a professional moving staff was employed to pack and move the bulk of the equipment, students were enlisted to transfer lighter items. However, in spite of the work involved, the department welcomed the change. The modern equipment in the new laboratories greatly increased the efficiency and effectiveness of the department in teaching science students.

In previous years all the equipment was scattered throughout numerous preparatory rooms in the science wing. Endless searching for a desired item terminated in the Central Storage Room which contained all lab equipment for Biology, Chemistry and Physics.

A lab technician was added to the staff to assist the teachers, while students were also employed to mix solutions and gather materials for class use.

Two independent study areas were available for student use; one in the Media Center which housed texts and research materials, and one in the new science wing. This was a fully equipped laboratory where students were able to conduct labs under the supervision of a teacher.
