MARY HAMULAK

VITA KOLBER

"Girls, next time use a frying pan when frying eggs!" Mrs. Deusch.

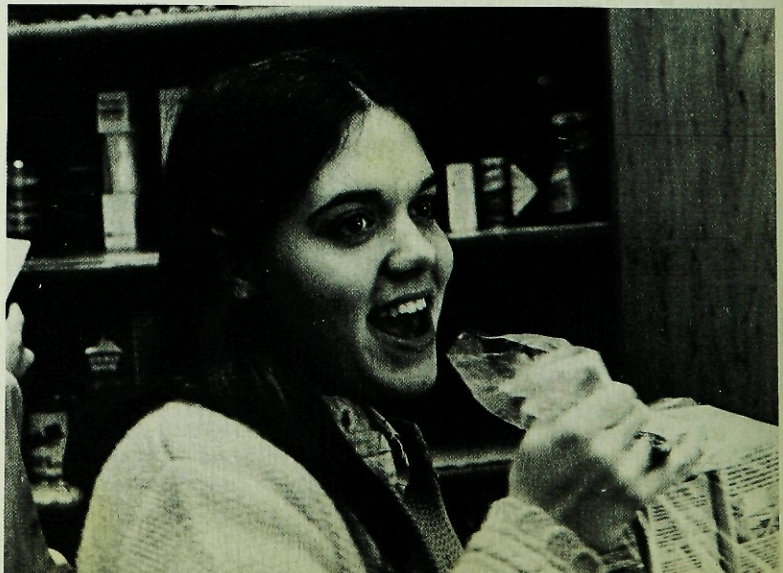

Home Economics Is Really Cooking

Regardless of any other future ambitions, knowledge in homemaking is useful to both boys and girls. The Home Economics Department made strides to prepare students to meet high standards of domestic efficiency.

Foods I and Clothing I taught young homemakers basic techniques which paved the way to more complicated endeavors in Foods II and III and Clothing II and III. The Home Economics program also included courses in Child Care, Interior Decorating and Family Living which developed other aspects of home life.

Trips to Hershey, Pa., a furniture showroom, a pattern company and a material manufacturer in New York supplemented class studies.

The department worked this year to include a separate tailoring course, a co-ed course in food service management and a new course in sewing for those who have never sewn before for next year's curriculum.

"If this is the baking soda, what did we put in the batter?" Pat Scott.
