

Chuck Nasmith and Jim Boyle prepare to attack their chairs in Wood Shop.

The Industrial Arts Department made great use of its new shops this year. More up-to-date equipment in the metal, wood and auto shops enabled the staff to better prepare its students in the latest industrial technologies.

General Shop, a co-ed course, offered a variety of skills in metal, wood and auto shop, electronics and fibreglassing. The department may well boast of its course in fibreglassing as it was rare that this course be offered on the high school level.

Mechanical Drawing was moved from upstairs to its new location near the shops. The double room space proved more conducive to learning as students approached the subject in more depth.

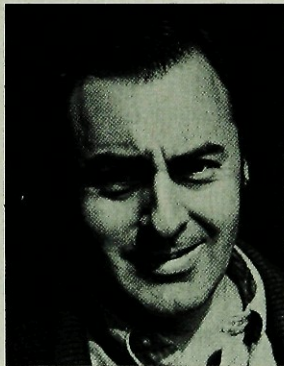

Once again the Co-Operative Work Program enabled students to attend school in the mornings and put their skills to practical use in jobs in the afternoons. This program also gave participants a good head start at earning a living.

Preparing students for work, vocational school or college was the goal of the Industrial Arts Department. Enthusiasm and improved facilities helped it more successfully fulfill that goal.
