Does  $y=mx+b$  or is it  $x=mb+y$ ? Teachers in the Math Lab help students with problems such as this. The computer terminal in the Lab may be used for independent study projects, or in conjunction with classroom work. Two new classes, Math Foundations III and IV, both full year courses, are offered to enable students to become proficient in the concepts and applications of algebra and geometry. From there, students can move on to math analysis and calculus.

Math students are taught on all levels at SPFHS. The Math Department not only teaches basic arithmetic skills, but works toward greater student understanding of the more sophisticated concepts of higher mathematics.
