GLORIA PORTNOFF

EDWARD STOLT

Physics, Animal Behavior, Plant Growth, Astronomy ... the list goes on as the Science department offers courses in almost all branches of the sciences: the smell of sulfur is common in the halls as Chemistry classes concoct potions at their Bunsen burner, while biology students breed fruit flies.

A serious student of science, or one who just wishes to satisfy his curiosity about a particular type of science can take any one of the many science courses. This extensive program benefits both students and teachers, as everyone can take the science class which he finds most appealing.
