

In several ways, Scotch Plains-Fanwood High School is like the Rubik's cube. It, too, is "six-sided," being composed of four classes, the staff and the administration. Just as there is movement between the six sides of the cube, there is a good deal of mobility between the "six-sides" of the school. The different colors intermingle as one tries to solve the puzzle, and the individuals in the school mingle as they meet others. Freshmen through seniors, staff, and administration become as intermixed as the cube as they live, grow and learn together.
